## FFS DigiXP (Unified Digital Experience Platform)

The **DigiXP** is a unified digital experience platform that is fully API-enabled unified digital experience platform (DXP), you can build you web applications that will work side by side with any other existing digital and online systems.

With **DigiXP** modern flexible architecture, applications do not work in isolation but unified and integrate with all host back-end systems running at the organization, to bring all together.

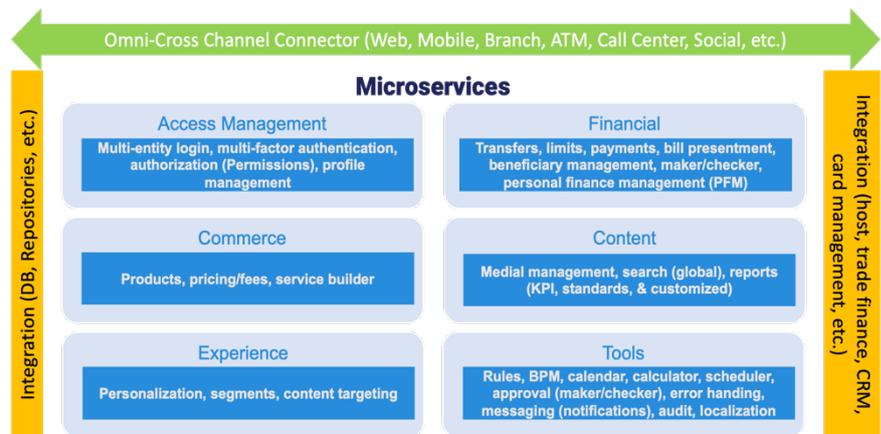

FFS **DigiXP** goes beyond the needs of mobile and online to service additional channels to service additional channels (e.g., call center or kiosks) and engagement methods (e.g., wearables, virtual assistance, and more) with a flexible modern architectural model that contains a significant middle component, built for openness, ease of integration, and cloud- based deployments.

## Inside DigiXP Unified Platform

Through API-enablement, **DigiXP** delivers new level of service capabilities to transform the business as a marketplace to broaden the scope and reach of product offerings through easily reuse of components and products or allow FinTech's to call specific **DigiXP** microservices and functions.

Under the hood, we have built these engines as mid-office microservices that work together to integrate to all islands of host systems, databases, repositories, through the omni-cross channel connector that connect all type of channels (web, mobile, branch, ATM, call center and social).

**We provide all these capabilities from a single unified digital platform**
